Why NOT keep things simple?

Why add anything else?

functionality

Find relevant code quickly

(for you and your teammates)

Update functionality without a re-write of large portions of your code

Code Reuse

(don’t write the same/similar code twice)

Code should be fairly easy to test

(small chunks of functionality)

Summary

- Purpose of additional technologies and approaches is to **deal with complexity**
- Easier to deal with code:
  - Good code organization
  - Updating part of it shouldn’t affect other parts
  - Reusable code
  - Testable code
